

Mobile Sync for Webmail: iPhone (and iPad)

Please Note: Before adding any sync service, you should consider backing up your existing data.

1. Click your phone's **Settings icon**, then find and click **Mail, Contacts, Calendar...**

2. Click **Add Account**, and then click **Microsoft Exchange**. Please note: this is not a Microsoft Exchange account, but it will use the Exchange service for syncing.

3. Fill in the following account fields and click the **"Next"** button.

Email	Your email address
Domain	Leave this blank
Username	Your email address (again)
Password	Your password
Description	Whatever you'd like

4. If you see a warning like "Unable to Verify Certificate," don't worry, just click **Accept** or **Continue** to proceed with set-up.

5. Regardless of the previous error, the next screen will ask for server info. Type **mobilesync.emailsrvr.com** and click the **"Next"** button.

Server	mobilesync.emailsrvr.com
---------------	--------------------------

6. Be sure to select the types of data you want to sync and click "**Done.**" Mobile Sync for Webmail does not support "Tasks" (also called "Reminders").

7. In some instances, you may have to reboot your phone for Mobile Sync to take effect.
